Which external creators should TrueID pilot to test comedy and movie-recap expansion?

Kanpirom Suksawat · 6810424016 · Repo: github.com/DecisionLabs-AI/madt7202-web-social-network

1 The decision

Which two non-True creators should TrueID invite to a six-week pilot? Owner: Content Partnership Lead.

2 Why a network

Ranking by views treats creators one at a time. TrueID needs creators who share searches with True's own channels and also reach searches where True is absent, to carry viewers across: a network property.

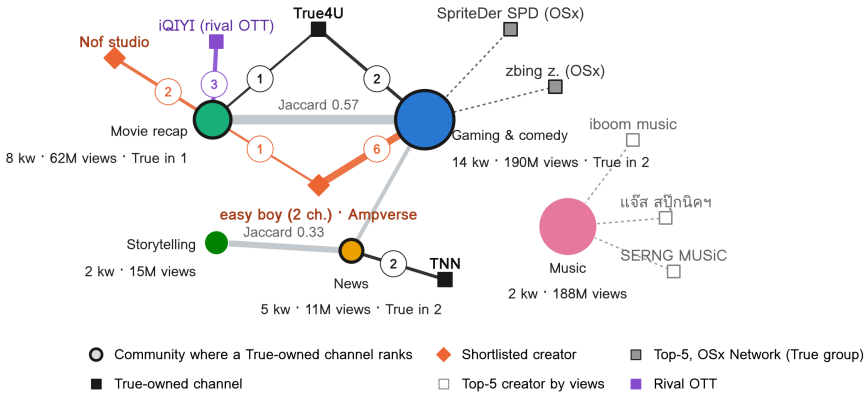

3 Data

Source	Official YouTube Data API v3, under its Terms of Service; public data only. Trending videos gave the keywords; one search per keyword gave the top 50 videos of the last 90 days
Keywords	40 tags used by at least 3 channels on Thailand's trending list, fixed before any analysis
Sample	34 keywords, 836 top-25 slots, Thai titles; pulled 11 Oct, then daily to 14 Oct
Bias	Search only (no home feed); rankings shift daily. Search rank is exactly what we measure
Ownership	From channel descriptions: zbing z. and SPD list True's creator network (OSx) as contact; easy boy lists the agency Ampverse; Nof studio lists none. Private contracts are not visible

4 Graph construction

Nodes, links	Keywords; two are linked when the same channel is in both top 25s. 34 nodes, 105 links (6 keywords with < 10 Thai results dropped)
Weighting	Jaccard (shared channels ÷ all channels of the pair), not raw counts, which over-rate generic words: raw puts "สนุก" (fun) 2nd, Jaccard 6th. Removing it changes nothing
Bridge creator	Ranks for a keyword where a True channel also ranks and for one where none does; ordered by keywords covered. easy boy's two channels merged; TV and rival apps excluded
Two views	Baseline counts only True-owned channels; Scenario A also counts zbing z. and SPD as True

5 The graph

Baseline view. Keywords are grouped into communities (Louvain; kw = keywords). Grey width = keyword overlap between communities. Coloured line = the channel ranks in that community; number = how many keywords.

6 Findings

- **Low visibility for True's own channels does not mean the True group is absent.** True-owned channels hold 5 of 836 slots, but two of the five most-viewed creators (zbing z., SPD) belong to OSx (77 with them).
- **Comedy and movie recap are the most connected communities** (overlap 0.57; strongest in 3 of 5 pulls).
- **easy boy is the reliable bridge; Nof studio is uncertain.** easy boy ranks first in 4 of 5 pulls (5 of 5 in Scenario A) and is also #1 among external creators on betweenness centrality, a standard bridge measure, in 4 of 5. On the main pull it stays first when we change the top-N cut-off, require more videos per link, or remove any one True video. Nof studio is a bridge in only 3 of 5 pulls. The 80% bar and some checks were set post hoc.

7 Recommended action

- Pilot easy boy (via Ampverse) as the main bridge and Nof studio as a trial, for six weeks, through DOODi, TrueID's new creator content brand. Owner: Content Partnership Lead; brief by 31 Oct. If internal records show either is already in the True group, keep them as an internal activation.
- Give each a tracked link and compare with one top-viewed creator; continue only with ≥ 20% more new viewers and no lower 7-day return rate. Handle zbing z. and SPD through OSx.

8 What would change my mind

Appearing in the same searches does not prove a shared audience or that viewers will move to TrueID, and in Baseline the bridge depends on one film on True4U (a True channel). If the pilot misses the bar above, I would not sign a longer deal.
